The paper discusses the methods of assessing the sensitivity of the method and analyzes the indications for using it. When it is necessary to investigate the sensitivity of the method, the background value should be detected in each laboratory, which can be achieved through the use of standard materials, e.g., allergen extracts and skin prick test materials (SPTs). The SPT method is not widely used in the USSR, it is employed only in small quantities. It may be used for the detection of sensitization to an inhaled allergen, when its concentration in the tested subject's alveolar air is less than $5 \times 10(5)$ particles/ml. The practical use of the SPT method requires that certain preparatory stages be implemented. The quality of the extract and the materials of the SPT are not always ensured. Errors can occur in the assay of the allergen concentration (on the basis of its quantitation) in the extract and the evaluation of the allergen concentration. It is recommended to adopt the method of preparing a standard reference material. The method of evaluating the allergen concentration in the extract is connected with the preparation of the antigen, which requires additional processes. Before preparing a standard reference material, special safety standards should be taken into account. In addition, the reference material should be subject to testing for sterility and for its stability in time. The method of standard reference material preparation is not implemented in the majority of laboratories in Russia. A small number of allergists use it routinely. For the SPT, the quantity and quality of the extracts should be verified, the extracts and SPTs should be tested for sensitivity, the methods of SPT readouts should be tested for accuracy and the standard reference materials prepared. Designed in cooperation with DANIELLE LORIN, MFA, this collection of original paintings on canvas, each depicting an abstract pattern, is a fine example of the timeless beauty of traditional Chinese painting. Each canvas includes a 20-page guidebook with a history of the painting, a detailed description of the painting technique, coloration, and use of paints, and a list of sources of inspiration. Additional Information Size: 28" x 40" Artist: Danielle Lorin Theme: Gui Hua Artist Statement: Gui Hua means Beautiful. It's a Chinese painting-style that flourished during the Ming and Qing dynasties. The term Gui translates to “cane and grass,” while Hua means “to put forth effort.” I want my paintings to be a distillation of my imagination. They are my attempt to express the idea of beauty that pervades and permeates everything. I hope the paintings will speak to people and reach
